

Always the safe alternative: Air dryer from febi bilstein

In the cold and wet winter season, reliable operation of the air dryer is extremely important. However, this can be challenging because compressed air systems need clean, dry air to perform efficiently.

Air dryers protect the pneumatic system from contamination by humidity and foreign particles. This stops the brake cylinders and valves from corroding or freezing up in temperatures below zero. Cartridges with oil separators also prevent the desiccant and compressed air system from being contaminated with oil.

In wet weather conditions, the granules in the cartridge absorb moisture in just a short compressor run time. The desiccant then has to be regenerated. If this doesn't happen properly, possibly due to incorrect settings or a defect in the air dryer, the compressed air system can be seriously damaged. This is caused by moisture or, in extreme cases, by granular residues from the cartridge and leads to failure as well as costly repair bills.

febi bilstein offers the air dryer (febi 44401) with pre-mounted air dryer cartridge (febi 34322) including oil separator.

Attention!

febi bilstein recommends changing air dryer cartridges once a year.

febi no. 44401

to fit:
Mercedes-Benz Actros I, II, III, Atego I + II, Atego 18t →,
Axor I + II, Axor Iran, Econic
Mercedes-Benz Bus O 530 Citaro, Tourino, CBC, IBC, OH
OE No. 000 430 98 15
