

Sleeve for Injector

This inconspicuous copper sleeve serves the injection nozzles, also called injectors, as a seating in the cylinder head. The material copper provides a good heat dissipation of the injector and serves as a seal between the injector and the cooling circuit.

These sleeves are no longer available as original parts from MAN, who only provide the entire cylinder head. febi offers the sleeve separately together with the O-ring necessary for sealing against the coolant circuit.

Attention!

Always use a new sleeve when installing an injector!
Fatigue of the sleeve material and the resulting leaks between the fuel return and the cooling system can cause high consequential costs due to coolant in the fuel.

febi no. 46400

to fit:
MAN engines series D28XX
OE No. 51.03205.1019
