Lubricant between the Permaglide bush and guiding sleeve **increases the wear!**

Dirt collects in the bush and congeals the lubricant. The bearing does not run smoothly, which could lead to the Permaglide bush working its way out of the release bearing.

 The Permaglide bush (**fig. 1, arrow**) and the guiding sleeve of the release bearing must **not** be greased!

Appropriate spare parts can be found in our on-line catalogue at www.Schaeffler-Aftermarket.com or at www.RepXpert.com.
