from 01.2002

Engines: F4R 746
F4R 770
F4R 771

LuK RepSet®: 624 3200 09
624 3200 34

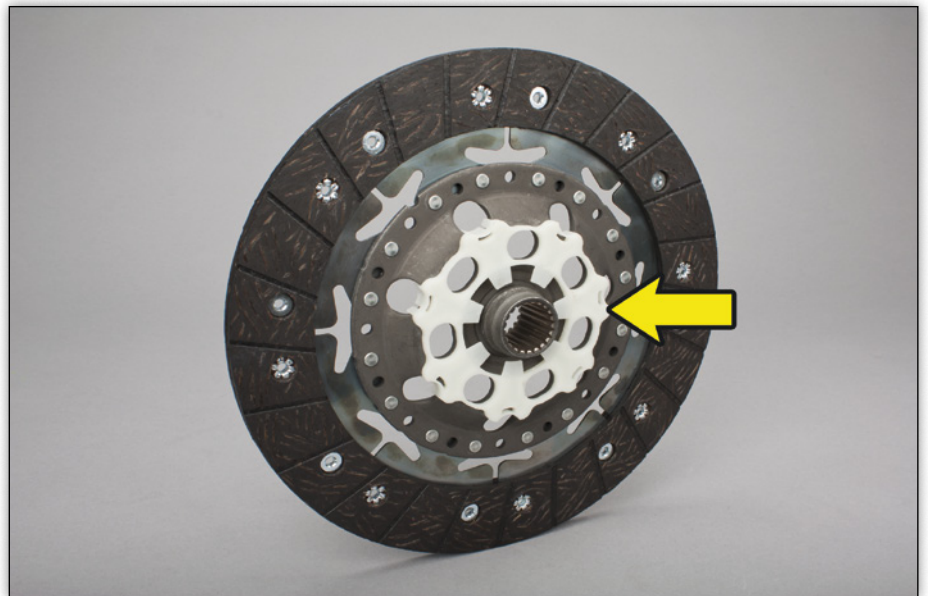

Image 1: Clutch disc with plastic ring

A DFC (Damped Flywheel Clutch) is installed ex works in the vehicles mentioned above. The DFC is an upgrade of the dual mass flywheel. In the DFC, the clutch disc, clutch pressure plate, crankshaft screws and dual mass flywheel are combined in one compact module. To simplify the process of fitting it to the engine in series production, the clutch disc is equipped with a plastic ring. The purpose of this ring is to hold the crankshaft screws in the holes in the DFC.

Clutch discs without a plastic ring were generally included in previous LuK RepSets®. Depending on the frequency of repair, either clutch disc version may therefore be installed in the vehicle.

Schaeffler Automotive Aftermarket now only includes clutch discs with a plastic ring in LuK RepSets®.

Note:

The plastic ring has no influence on the function of the clutch!
It can be left installed or can equally be removed!

Note the specifications of the vehicle manufacturer!

Appropriate spare parts can be found in our on-line catalogue at www.Schaeffler-Aftermarket.com or in RepXpert at www.RepXpert.com.
