

Optimised Thermal Management - with the electromagnetic fan clutch (febi 27843) from febi bilstein

Attention:

In the independent aftermarket, there are many fan clutches offered as direct replacement items for OE specification, however many of these operate purely on a viscous clutch and require an amount of modification to the vehicle engine management systems when fitted. By using an electromagnetic direct replacement the advantages of OE specification are kept and wiring is not compromised.

Benefits:

- Specified Increased fuel economy through correct engine cooling as set by OE engine management parameters
- Maximum cooling performance from 100% switched connection.
- Optimised Cold start and rapid achievement of operational temperature through complete disconnection of coupling.

febi no. 27843

Reference no. 541 200 05 22
to fit Mercedes-Benz Actros I+II+III
