

Expansion tank for Volvo Trucks and Buses

The expansion tank in the engine cooling circuit enables the intake of the expanding coolant. This in turn leads to an increase in pressure during the driving operation. In case of a malfunction in the cooling system a possible overpressure is released by a pressure relief valve integrated into the cap of the expansion tank to prevent further damage to other components of the cooling system.

The expansion tank by febi bilstein fulfils all the necessary OE-material requirements. Precise measurements ensure easy installation. Expansion tanks by febi bilstein come complete with caps and coolant level sensor already fitted.

Further benefits at a glance:

- Cap with integrated pressure relief valve prevents damage caused by excess pressure in the cooling system
- For a cost-effective repair the accessories are also available separately

febi no. 45934

to fit:

B5LH, B5RH, B7L, B7L DD, B7R, B9TL, B10B, B10L, B11R, B12, B12 (BR), B12B, B12M, B12R, B13R, FH (G3), FH12 (G1, G2), FH12 (BR), FH12 (J), FH16 (G1, G2)

OE No. 1676400 S1

Accessories:

febi no. 35357

Coolant level sensor

febi no. 11562

Cap for expansion tank

febi no. 45932

Cap for expansion tank
