

Keep cool at all times – With coolant hoses by febi bilstein

Coolant hoses are under significant stress from internal temperatures in excess of 100 °C, pulsating oscillations at the engine and chemical additives from the outside (coolant, oil, fuel, etc.). When a coolant hose becomes leaky, the affected vehicle loses coolant. In extreme cases, resulting overheating can have devastating consequences for the engine.

Thanks to the precise fit and exceptional resistance, coolant hoses by febi bilstein excel in terms of durability.

The hose clamps with tension springs especially selected by febi bilstein facilitate an ideal compensation for thermal expansion in driving mode, and therefore the secure fastening of the coolant hose.

febi bilstein offers all coolant hoses and hose clamps as individual units and as a ProKit.

febi no. 49167

to fit:
IVECO Euro Trakker, Euro Star, Euro Tech

The complete range can be found at: www.trucks.febi-parts.com
