

febiTruck

febi 172533

To Fit:

Volvo Bus B11R, B13R

Volvo Trucks FH16, FH, FM, FM4

Repl. no. 22016995

EN

Excellent Under Pressure Air Compressors from febi

Compressed air is mandatory for the brake system of all commercial vehicles from 7.5 t total gross weight. However, it is not only the brake system that relies on compressed air. Air suspension, gear shifting or the horn often also do not function without compressed air. Only a perfectly working air compressor can reliably provide the required compressed air in sufficient quantity and at the required pressure for all systems.

If the air compressor does not reach the intended delivery rate or pressure, this is usually due to the cylinder head gasket, the valve plate or the compressed air system. If an air compressor is mechanically defective or heavily worn, repair is often not worthwhile. Replacing the entire air compressor can be the more economical solution.

febi offers not only the complete air compressor, but also additional replacement parts such as pistons, cylinder head and connecting rods as well as reed valve and gasket set.
